TABLE III

DRIFT ROBUSTNESS: HWA VERSUS NSR-HWA WITH THE SAME DRIFTSLICE B=1 COMPENSATION

Model	**Training**	**Compensation**	λ_{NSR}	**Test Accuracy (%)**				**Accuracy Improvement (pp)**			
				Final Test	**Initial 20s**	**Final 5Y**	**Max-drop**	**1h**	**1d**	**6M**	**5Y**
ResNet-32	Standard HWA	DS-B1	—	—	**89.96**	85.11	4.85	—	—	—	—
ResNet-32	NSR-HWA	DS-B1	0.1	—	89.88	**85.30**	**4.58**	-0.04	-0.10	+0.03	+0.20

Max-drop = initial 20s accuracy minus the minimum across all 12 retention timestamps.
Improvement = NSR-HWA minus HWA (percentage points). Final Test before PCM is unavailable in the supplied retention CSVs.
