TABLE III

BASELINE HWA + GDC-SAFE VERSUS PROPOSED HWA + DRIFTSLICE

Model	Training	Compensation	Test Accuracy (%)				Improvement over GDC-safe (pp)			
			Final Test	Initial 20s	Final 5Y	Max-drop	1h	1d	6M	5Y
ResNet-32	HWA	GDC-safe (baseline)	—	89.91	84.14	5.78	—	—	—	—
ResNet-32	HWA	DriftSlice B=1 (proposed)	—	**89.96**	**85.11**	**4.85**	+0.20	+0.30	+0.70	+0.97
ResNet-32	HWA	DriftSlice selected B (proposed)	—	89.96	85.07	4.88	+0.20	+0.28	+0.67	+0.94

Same HWA-trained checkpoints; means across 3 training repetitions, each with 30 device realizations.
Max-drop = initial 20s accuracy minus the minimum over 12 retention timestamps. Selected B uses validation data.
Improvement = DriftSlice minus GDC-safe (percentage points). Final Test before PCM is unavailable.
